

Intro to Alchemy: Convert Existing Workloads to Gold-Master Images

HO126888

Wayne Patton – SUSE – Technical Account Manager
Rick Ashford – SUSE – Sales Engineering Manager

Agenda

What is Machinery?

What is KIWI?

What problem is solved?

Common Use Case(s)

Hands On

Inspect System with Machinery

Overview of Machinery Data

Machinery export to html

Machinery Export to KIWI

Build new image with KIWI

Run image

Modify image data

Rebuild with KIWI

Run image

Sandbox time

Converting Workloads

Move a system from platform to platform (physical or virtual)

Move a system to the cloud

Define a base system that's repeatable

Converting Workloads

Move a system from platform to platform (physical or virtual)

Move a system to the cloud

Define a base system that's repeatable

Machinery – Will inspect a system creating a system description

KIWI – Tool used to build a system image

What is Machinery?

- <http://machinery-project.org/>
- A command line application for creating and working with system descriptions

What is Machinery?

- <http://machinery-project.org/>
- A command line application for creating and working with system descriptions
- **Discover configuration**
 - Inspect a system
 - Extract configuration information into various output formats

What is Machinery?

- <http://machinery-project.org/>
- A command line application for creating and working with system descriptions
- **Discover configuration**
 - Inspect a system
 - Extract configuration information into various output formats
- **Validate Systems**
 - Compare against known good state
 - Track changes over time

What is Machinery?

- <http://machinery-project.org/>
- A command line application for creating and working with system descriptions
- **Discover configuration**
 - Inspect a system
 - Extract configuration information into various output formats
- **Validate Systems**
 - Compare against known good state
 - Track changes over time
- **Uses ssh key for accessing inspected systems**

Machinery Use Case

- Creating system description
- Export inspection data (ie: KIWI or HTML)
- Compare system descriptions
 - Same system different time
 - Different systems
 - Example – Several web servers are supposed to be the same but one isn't acting correctly
- Physical to Cloud
- Migrate SLE 11 to SLE 12

inspection details

OS

Operating System (inspected host: 'jeos', at: 2017-07-26 14:06:39)

Name	SUSE Linux Enterprise Server 12 SP2
Version	12-SP2
Architecture	x86_64

PK

Packages 323 packages (inspected host: 'jeos', at: 2017-07-26 14:06:39)

Name	Version	Release	Arch	Vendor	Checksum
Mesa	11.2.1	104.3.3	x86_64	SUSE LLC	f67680fca39706a34cfb7640d7988698
Mesa-libEGL1	11.2.1	104.3.3	x86_64	SUSE LLC	bceca3aec9a444b7c45563ce7e294f5f
Mesa-libGL1	11.2.1	104.3.3	x86_64	SUSE LLC	580dbb91fc7ef9ebccd61041a11923f1
Mesa-libglapi0	11.2.1	104.3.3	x86_64	SUSE LLC	ae17638368f1261a29ab61dfe63ea31c
SUSEConnect	0.3.1	19.11.2	x86_64	SUSE LLC	227dd4f85d0e354306e48f72d931c75e
SuSEfirewall2	3.6.312	2.3.1	noarch	SUSE LLC	293e83f0e9dd2c152ee04144dd2521eb
aaa_base	13.2+git2014091...	32.1	x86_64	SUSE LLC	4f535a78149a83f79d83511d4cbbdab5

Machinery compare example

```
srv:~ # machinery inspect jeos
```

```
srv:~ # machinery copy jeos jeos.orig
```

Install apache on jeos

Create index.html on jeos

```
srv:~ # machinery inspect jeos
```

```
srv:~ # machinery compare jeos.orig jeos
```

```
# Packages
```

```
Only in 'jeos':
```

```
* apache2,      * apache2-prefork
* apache2-utils, * libapr-util1
* libapr1,      * liblua5_2
* libnghttp2-14
```

```
# Services
```

```
Only in 'jeos':
```

```
* apache2.service: disabled
* apache2@.service: disabled
```

```
# Unmanaged Files
```

```
Only in 'jeos':
```

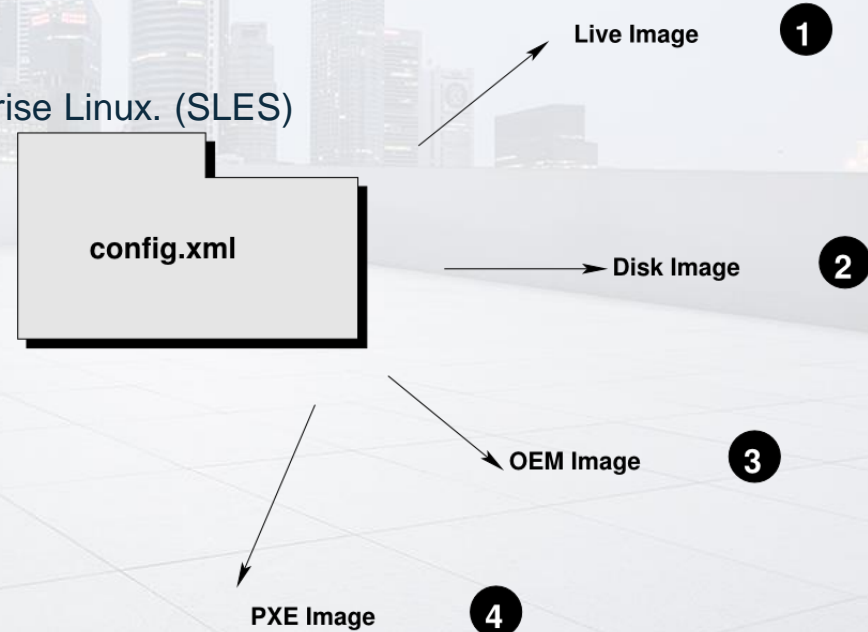

```
* /etc/sysconfig/apache2 (file)
* /srv/www/htdocs/index.html (file)
* /usr/sbin/httpd (link)
* /var/lib/systemd/migrated/apache2
(file)
```

What is KIWI?

- **Tool for building Linux system images**
 - SUSE Studio uses it as back-end
 - openSUSE Build Service
 - SUSE Products are built with KIWI
 - Included and fully supported in SUSE Enterprise Linux. (SLES)

What is KIWI?

- **Tool for building Linux system images**
 - SUSE Studio uses it as back-end
 - openSUSE Build Service
 - SUSE Products are built with KIWI
 - Included and fully supported in SUSE Enterprise Linux. (SLES)
- **Output many formats:**

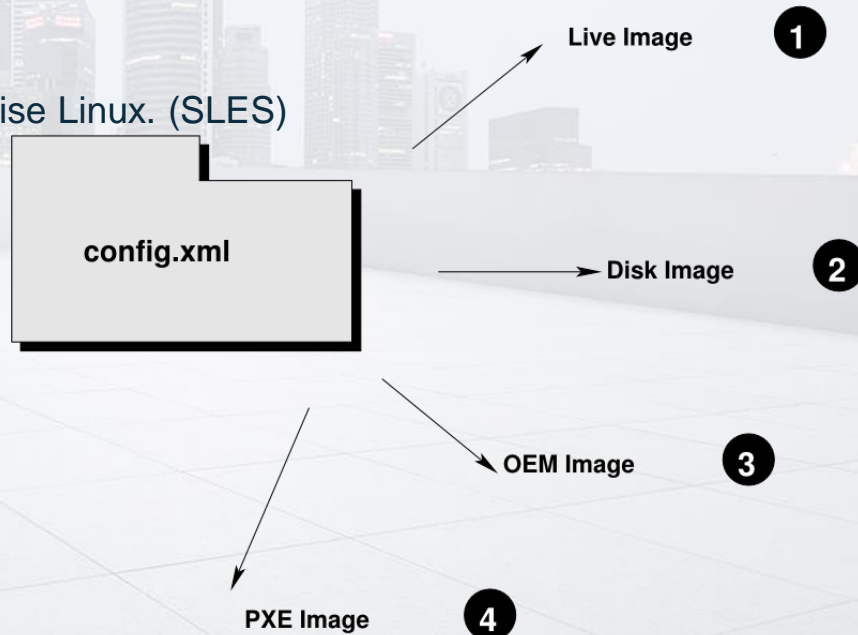

What is KIWI?

- **Tool for building Linux system images**

- SUSE Studio uses it as back-end
- openSUSE Build Service
- SUSE Products are built with KIWI
- Included and fully supported in SUSE Enterprise Linux. (SLES)

- **Output many formats:**

ISO	Live CD/DVD
PXEBoot	Hard Disk
USB	Amazon EC2 (.ami)
Docker	Google Cloud Format (..gce)
VMware (.vmdk)	XEN
Vagrant (.vagrant)	
VirtualBox (.vdi)	
Virtual Hard Disk (.vhd)	
KVM/Qemu (.qcow2)	
Open Virtualization Format (.ovf, .ova)	

KIWI Process

KIWI process is divided into two stages

- **Preparation:**
 - Create a root file system defined by configuration file.
 - Installs packages into the filesystem
 - Results in unpacked root tree

KIWI Process

KIWI process is divided into two stages

- **Preparation:**
 - Create a root file system defined by configuration file.
 - Installs packages into the filesystem
 - Results in unpacked root tree
- **Creation:**
 - desired image is created from the directory structure
- <https://doc.opensuse.org/projects/kiwi/doc/>

Lab Environment

Two Virtual Machines

sca – “Admin” machine you will do all work from.

Login as Geeko/linux

sc1 – This is the system we are going to inspect with Machinery

Lab – What are we going to do?

- Use machinery to inspect a VM.
- Explore the Universal System Description
- Export the description to KIWI
- Use KIWI to replicate original system and run a new VM
- Modify KIWI configuration, re-build and run
- Use machinery to compare configurations

Lab

1. **Open Intro-to-Alchemy-LAB.pdf**
2. **Text with grey background represents commands to type**
3. **You will be logged in as root!**
4. **Passwords = “linux”**

A Newton's cradle with five spheres. The leftmost sphere is red and is in motion, having just struck or about to strike the other four spheres. The other four spheres are silver and are at rest. The background is a light blue gradient. The text "Questions ??" is centered over the silver spheres.

Questions ??
